

HTTP 403 Unauthorized Error When Accessing /file/import.wsdl in Tungsten Import Connector

000045930 | Troubleshooting | Last updated 2026-09-09 | Kofax Import Connector

Applicable to: [Tungsten Import Connector 2025.1.3](#) and newer versions

ISSUE

When accessing the **Import Connector WSDL** URL: `http://<server name>:25086/file/import.wsdl` the request **returns: HTTP 403 Unauthorized**

The **Message Connector (MC) log** contains the following entry:

Possible CSRF attack detected. Url=/file/import.wsdl

This behavior may affect products or integrations that retrieve the Import Connector WSDL through the HTTP endpoint, including compatibility checks and validation testing

CAUSE

This issue is an unintended side effect of security improvements introduced under:

User Story 2210646: *Implement HTTP request rules to mitigate CSRF vulnerability*

Accessing WSDL files through the **web service interface** was not considered as part of the enhancement.

Related defect: **Bug 2264430** - *Access to WSDL files via Http fail since TIC 2025.1.3*

SOLUTION

Apply the following **workaround**:

- 1 Open the file:
`{MC Installation Folder}\xsd\Create_Config.xslt`
- 2 Add the following line immediately before **`</AllowedRequests>`**:
`<Rule>Target=/file/*.wsdl</Rule>`
- 3 Refer to the screenshot below for an example.
- 4 Run the MC Configuration Tool.
- 5 Restart the Message Connector.

After **completing these steps**, accessing WSDL file should return the **expected WSDL content** instead of an HTTP 403 Unauthorized error.
